Projects

Airlytics
July 2019
- o **Description:** AirBnB analytics tool to optimize hosts' rates of return in Berlin
- o Collaborated with 10 team members to create the application in a 1 week sprint
- o Added client login authentication using Axios with localStorage to enable session persistence
- o Successfully connected to Java back-end endpoints using token for Header Authorization
- o Built add, update, and delete listing functionality for users via Redux-Thunk and Axios calls
- o Implemented useState/useEffect React Hooks for local form state and async data rendering

GitHub Repo: https://github.com/airbnb-price-opt/front-end
Utilized: ReactJS | Hooks | Redux | Redux-Thunk | Axios | Styled-Components | Git | Figma

Satoshi's Law
July 2019
- o **Description:** Gives freelancers the ability track billable hours and receive Bitcoin as payment
- o Collaborated with 6 team members to create the application in a 48-hour Hackathon
- o Oversaw the creation of multiple UI views, configured according to design specifications
- o Incorporated Styled-Components and Material-UI to mirror Figma wireframe design files
- o Awarded Best Mobile UI in Lambda School's 2nd Annual Summer Hackathon out of 12 finalists

GitHub Repo: https://github.com/satoshi-s-law/frontend
Utilized: ReactJS | Styled-Components | Material-UI | React-Router | PropTypes | Git | Figma
